Backlog -Epics and User Stories

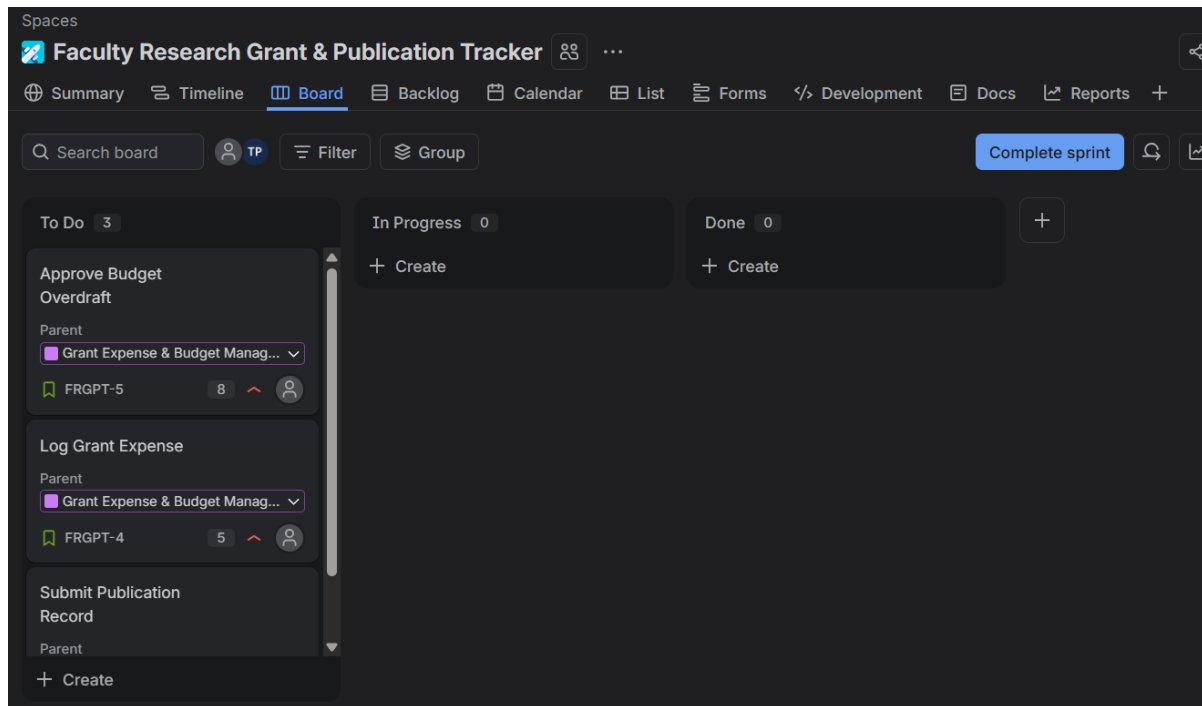

Full backlog showing all 6 user stories grouped under their parent epics (Grant Expense & Budget Management, Publication & Citation Tracking, Co-Author Collaboration & Fund Reporting), along with story points and priority.

Sprint 1 planned with story points

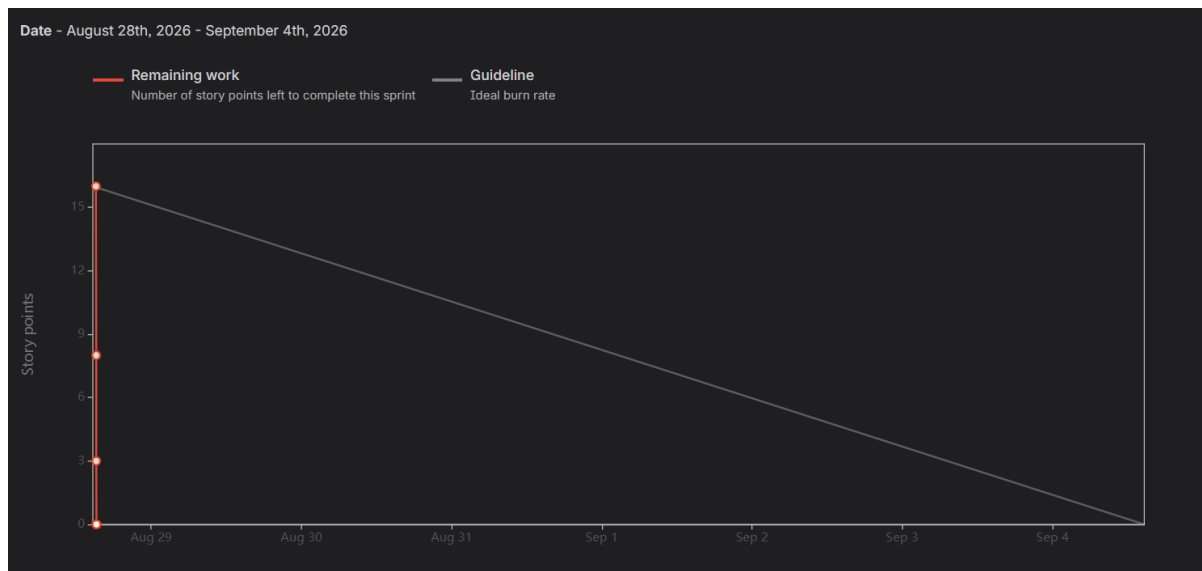

Sprint 1 populated with 3 stories (Approve Budget Overdraft, Log Grant Expense, Submit Publication Record) totalling 16 story points, with the remaining 3 stories left in the backlog for Sprint 2.

Sprint 1 board right after starting

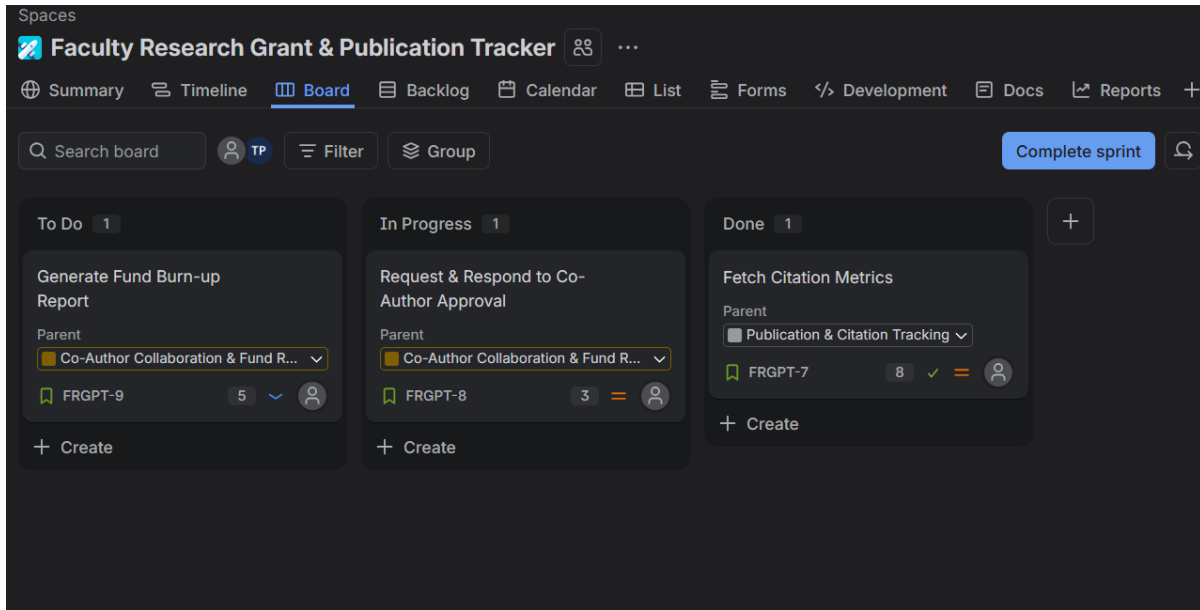

Active sprint board just after clicking Start sprint — all 3 stories sitting in To Do before any work has begun.

Sprint 1 burndown chart

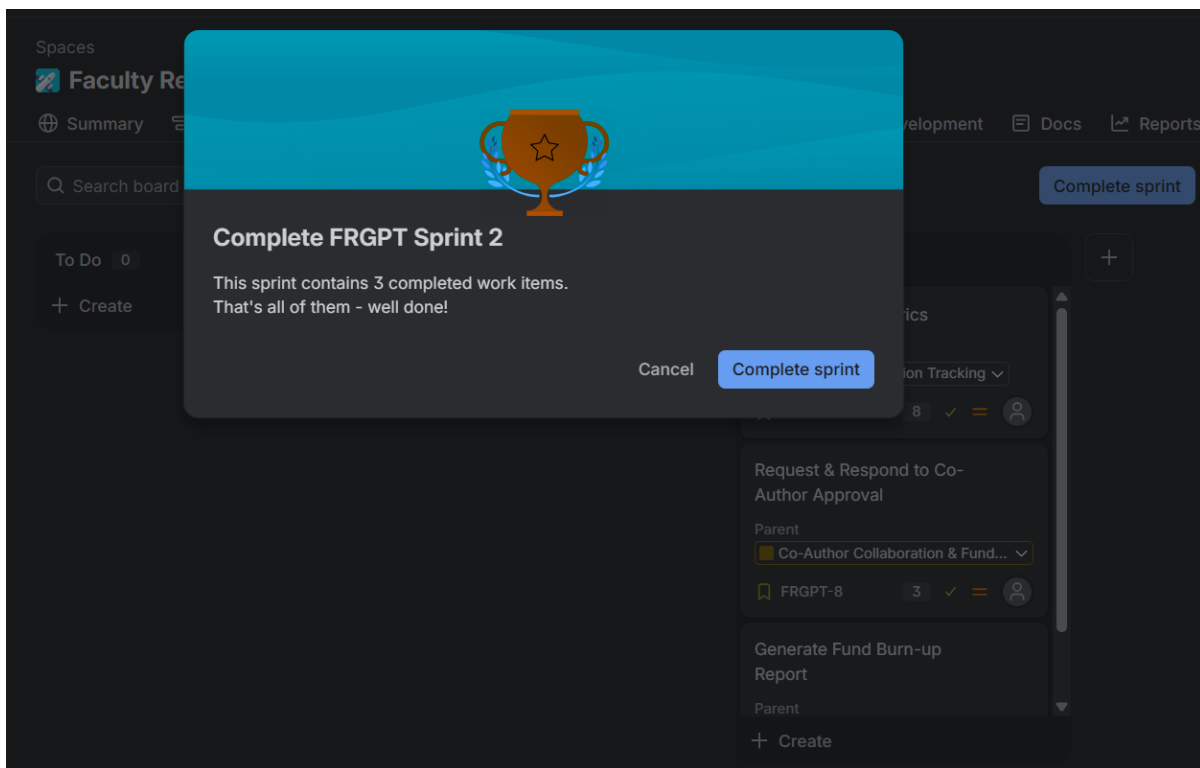

Burndown chart for Sprint 1. The remaining-work line drops from 16 to 0 almost immediately instead of following the ideal guideline, since all stories were moved to Done in quick succession during the simulation.

Sprint 2 board mid-sprint

Sprint 2 board showing work spread across all three columns — Generate Fund Burn-up Report in To Do, Request & Respond to Co-Author Approval in In Progress, and Fetch Citation Metrics already in Done.

Closing out Sprint 2

Confirmation dialog shown when completing Sprint 2, confirming all 3 work items were finished before closing the sprint.

Sprint 2 burndown chart

Burndown chart for Sprint 2. Same overall shape as Sprint 1 — points were burned down early rather than gradually across the week, which is expected given the compressed, simulated nature of the sprint.
